EDUCATION

University of Science and Technology of China (USTC)

Sep. 2021 – Expected Jun. 2024

Master of Science in Electrical Engineering

Hefei, China

- **GPA:3.78/4.3 - Rank: 4/71**

Xidian University

Sep. 2017 – Jun. 2021

Bachelor of Engineering in Information Engineering

Xi'an, China

- **GPA:3.8/4.0 - Rank: 3/156**

RESEARCH EXPERIENCE

Center for Wireless Communications, UC San Diego, CA

Jul. 2023 – Present

Graduate Visiting Student

- Implemented a mmWave mesh network testbed based on 802.11ad 60GHz radios. Collected various performance trace data like per-beam RSS and throughput based on the testbed.
- Designed deep reinforcement learning (DRL) models like deep Q-learning to configure the network simulator based on the testbed data.
- Implemented the DRL-enhanced simulator to two use cases, i.e., interference-aware link scheduling and base station association.

Broadband Communications Lab, UC Santa Cruz, CA

Jun. 2022 – Mar. 2023

Research Intern

- Generated the Jakes wireless channel model and verified the autocorrelation characteristics of the channel.
- Designed deep learning (DL)-based channel estimators with different training methods or data inputs. Verified the MSE of channel estimation and BER performance of neural networks.
- Designed a DL-based channel estimator that can adapt to the dynamic wireless channel.

Information Network Lab, USTC, China

Sep. 2021 – Aug. 2023

Research Assistant

- Designed a task offloading and resource allocation algorithm in user-centric networks using single agent/multi-agent DRL. The total energy consumption and average delay can be reduced by at most 67.48% and 48.1%.
- Proposed a joint user access, grouping, power control and computing resource allocation algorithm in NOMA-assisted networks using matching game theory and graph theory. The average uplink rate and average delay can be improved by at most 79.1% and 92.43%.
- Developed a network resource-aware blockchain consensus mechanism based on RAFT to ensure the credibility and reliability of network resource allocation.
- Designed a joint service caching and base station clustering algorithm in user-centric networks using GBD and ADMM optimization methods. The long-term delay and caching cost can be reduced by at most 93.75% and 53.12%.

State Key Lab of ISN, Xidian University, China

Dec. 2018 – Feb. 2021

Research Assistant

- Used software-defined network (SDN) controller RYU and Mininet to build a software-defined aviation combat network.
- Developed an intelligent routing algorithm based on Dyna-Q-learning, which can reduce the end-to-end latency by up to 21.4% compared to traditional routing algorithms.
- Constructed a wireless sensor network with multiple UWB and LoRa sensor nodes. Assembled a Bluetooth-based remote control anchor car with GPS based on STM32. Used Keil to realize the wireless communications between the mobile anchor and sensor nodes.
- Developed a TOA and RSSI hybrid localization algorithm based on trilateral localization and Kalman filter. The average localization error can be reduced by up to 43.75% compared to traditional TOA and RSSI methods.

AWARDS & HONORS

- 2023 National Scholarship (Awarded to 1% of 1100+ students)
- 2022 First Class Scholarship of University of Science and Technology of China
- 2021 First Class Scholarship of University of Science and Technology of China
- 2020 National Scholarship (Awarded to 1% of 156 students)
- 2020 Meritorious Winner of The Interdisciplinary Contest in Modeling (ICM) (Awarded to 8% of 7199 teams over the world)
- 2019 National Scholarship (Awarded to 1% of 156 students)
- Provincial Second Prize in National Mathematical Modeling Contest, 2019
- Provincial Second Prize in Chinese Mathematics Competition, 2019

SKILLS

Languages: MATLAB, Python, C/C++, Java, JavaScript, Solidity

Developer Tools: Pycharm, VS Code, WebStorm, Eclipse, Keil, Remix, CORE, Mininet

Technologies/Frameworks: Linux, GitHub, Git, Tensorflow, Pytorch, Cesium
